Technical information should always be available to the foremen and mechanics, because their careful and constant adherence to the instructions is essential to ensure vehicle road-worthiness and safety. In addition, the normal basic safety precautions for working on motor vehicles must, as a matter of course, be observed.

68 - Interior equipment

1 - Interior mirror

1.1 - Interior mirror

1.2 - Automatic anti-dazzle interior mirror

The automatic anti-dazzle interior mirror darkens infinitely when the driver is "blinded" from behind.

It consists of a mirror element and an electrics with two photo sensors.

The electronics recognise the light incidence from the front and the rear through the photo sensors.

If the light incidence is greater from the rear than from the front the electronics apply voltage to the conductive coating.

The applied voltage changes the colour of the electrolyte. The greater the voltage the darker the electrolyte. Therefore the light incidence is reflected to a lesser degree.

When selecting the reverse gear the anti-dazzle function is switched off and one can use the mirror to e.g. reverse out of a dark garage.

satelettronica

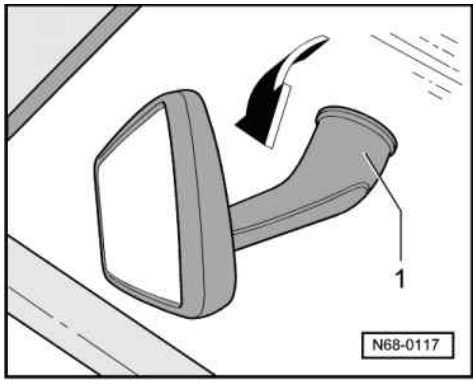
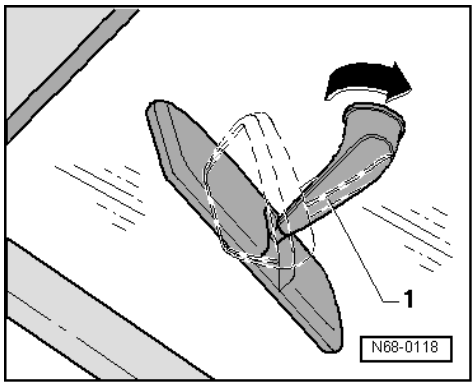
1.3 - Removing interior mirror



- -> Press interior rear-view mirror -1- downward at an angle off retaining plate (spring clip in mirror base).

1.4 - Installing interior mirror



- -> When installing, place mirror -1- in position, turned 60...90°,to mounted position and turn until locking spring clicks into place.

1.5 - Bonding retaining plate for interior mirror

Materials:

- Glass-metal adhesive kit D 000 703 A1

satelettronica
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

-> Tools:

1 - Glass scraper (commercially available)
2 - Blade (commercially available)

- Take mirror plate out from mirror base.
- Remove PUR adhesive from mirror base with a wire brush.
- Grind off three spacer protrusions on bonding surface. To do this, use sandpaper (360/400 grain) on flat surface.
- Keep sanded surface clean and free of grease.
- Scrape down PUR adhesive material and primer down to ceramic layer on windscreen using glass scraper.
- Clean bonding area with adhesive remover D 002 000 10 or cleaning solution D 009 401 04.

Warning! Do not damage ceramic coating. Scratches will remain permanently visible.

- Cut nylon mesh fabric exactly to the size of the mirror base.

Note:

Wear hand protection (rubber glove).

- Apply adhesive evenly and smoothly to base of mirror.
- Fit nylon mesh fabric onto base of mirror.
- Apply further adhesive to nylon mesh fabric by dabbing with the tube.

30 seconds are available from applying the adhesive to the nylon mesh fabric to pressing it onto the windscreen.

- Press base of mirror firmly (do not use force) against windscreen for 15 seconds.
- Remove excess adhesive with a cloth.

Note:

Interior mirror can be fitted after 15 minutes.

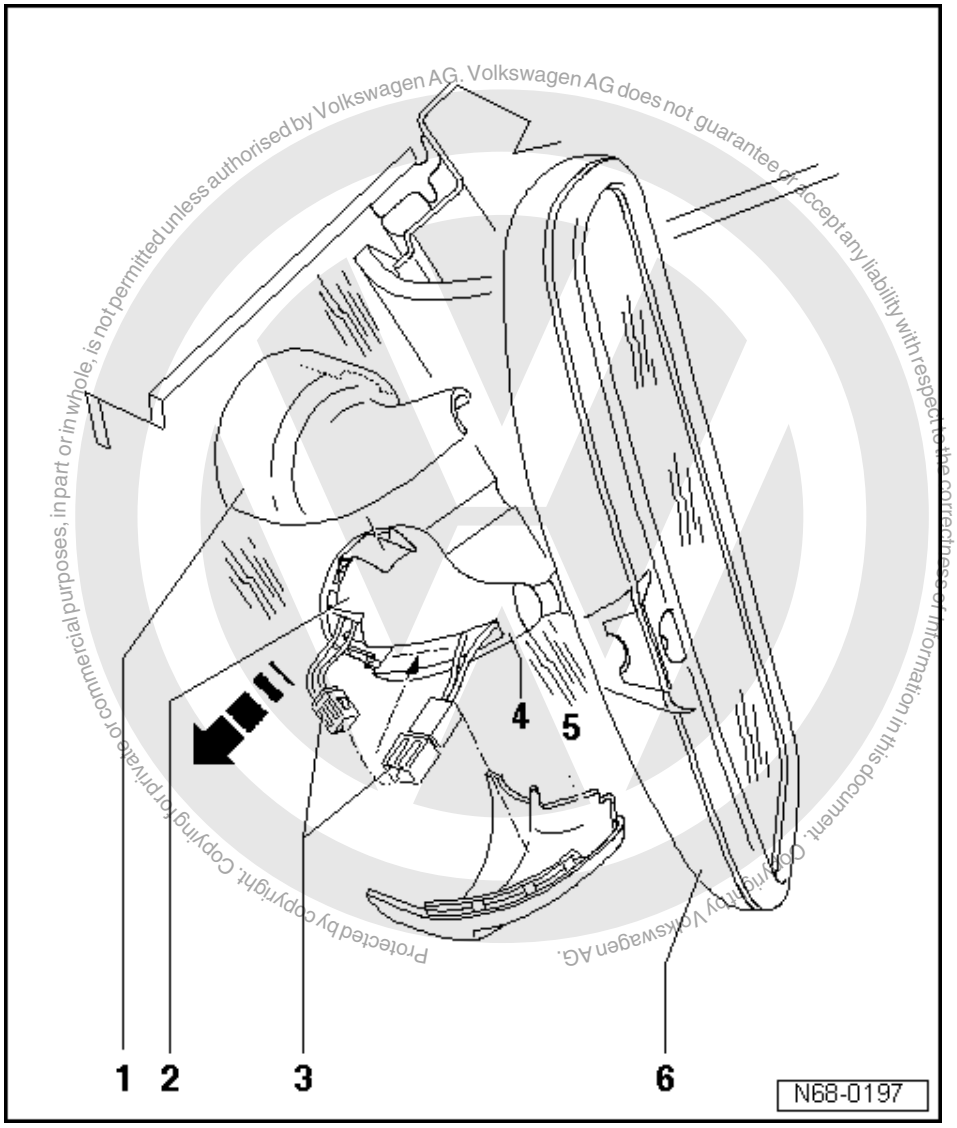
1.6 - Removing and installing interior mirror (with rain sensor)



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

Removing

- Press left -1- and right -5- covers apart and take off.
- Pull connectors -3- out from mirror base -4- and separate.
- Pull mirror base -4- with mirror -6-downwards off retaining plate -2- -arrow-.

Installing

Install in reverse order.

1.7 - Bonding on interior mirror base with rain sensor

Using the subsequent repair procedure the old method of removing the windscreen is no longer a requirement.

At the same time it is also possible to reuse the old mirror base which has fallen off.

Preparing windscreen

- All remains of the adhesive and primer must be removed from the ceramic pre-coating.

- Clean adhesive surface with cleaning solution D 009 401 04.
- Adhere to flash-off period of at least10 minutes.
- Apply glass/paint primer D 009 200 02.
- Flash-off period up to bonding: Minimum10 minutes to maximum of 1 hour.

Preparing the detached or new mirror base

- Mechanically remove adhesive remains (valid only for a mirror base which has become detached).
- Prepare adhesive surface by sanding down with wet fine emery paper (grade 800-1200) until water remains (does not run off) on adhesive surface.
- Then clean with cleaning solution D 009 401 04.

Bonding mirror base on

- Apply 2K polyurethane adhesive D 180 KD2 A1 direct to prepared and cleaned mirror base adhesive surface.
- Adhesive bead diameter: Approx. 2.5...3 mm.
- Press mirror base into position on prepared windscreen immediately after applying adhesive to base.
- Align mirror base in position on ceramic pre-coat surface and secure with adhesive tape.

Cleaning and removing excessive adhesive

- Carefully remove adhesive tape after 0.5...1 hour after attaching mirror base.
- Carefully remove the excessive but still soft adhesive with aid of a spatula.
- Then remove the excessive adhesive completely using a cloth or primer applicator soaked in cleaning solution.

Installing rain sensor and mirror

- The mirror can be fitted 2.5 hours after attaching the mirror base.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

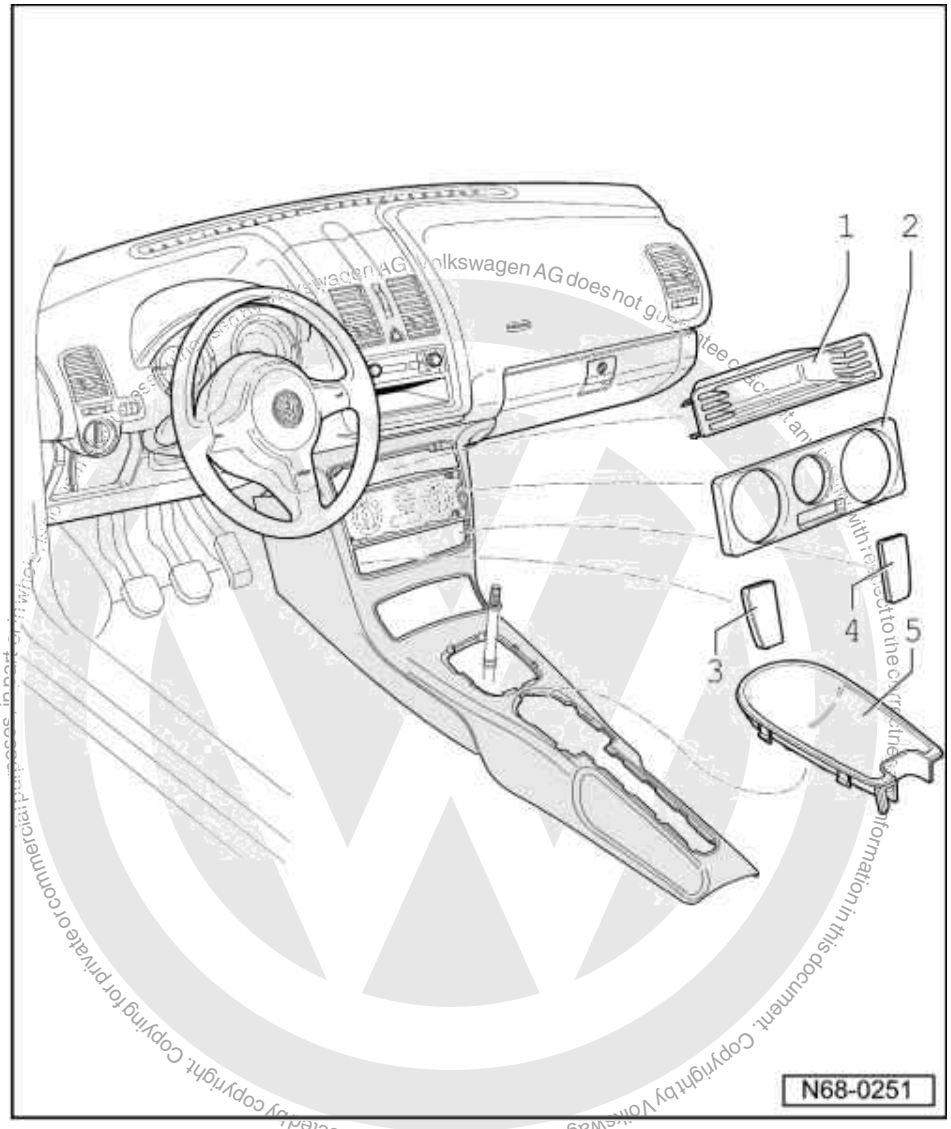
2.3 - Removing and installing centre console (Polo Classic 10.99 >, Polo Estate 10.99 >)



Notes:

- The removal and installation procedures may have to be modified slightly depending on equipment variants.

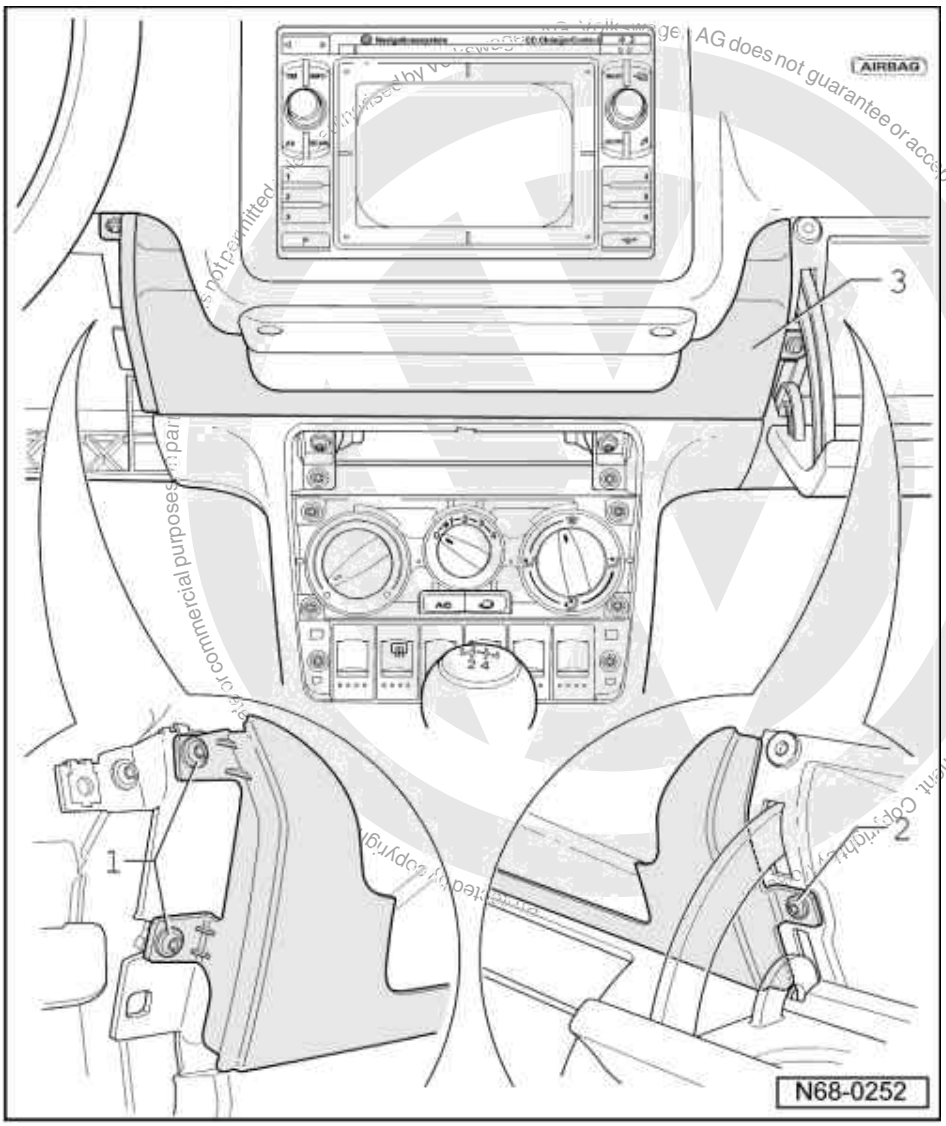
Removing

- Removing driver's side stowage compartment => Page 17 .
- Unclip coin box -1-, cover cap left -3- and cover cap right -4-.
- Unclip trim -2-.
- Unclip handbrake frame -5-.

Note:

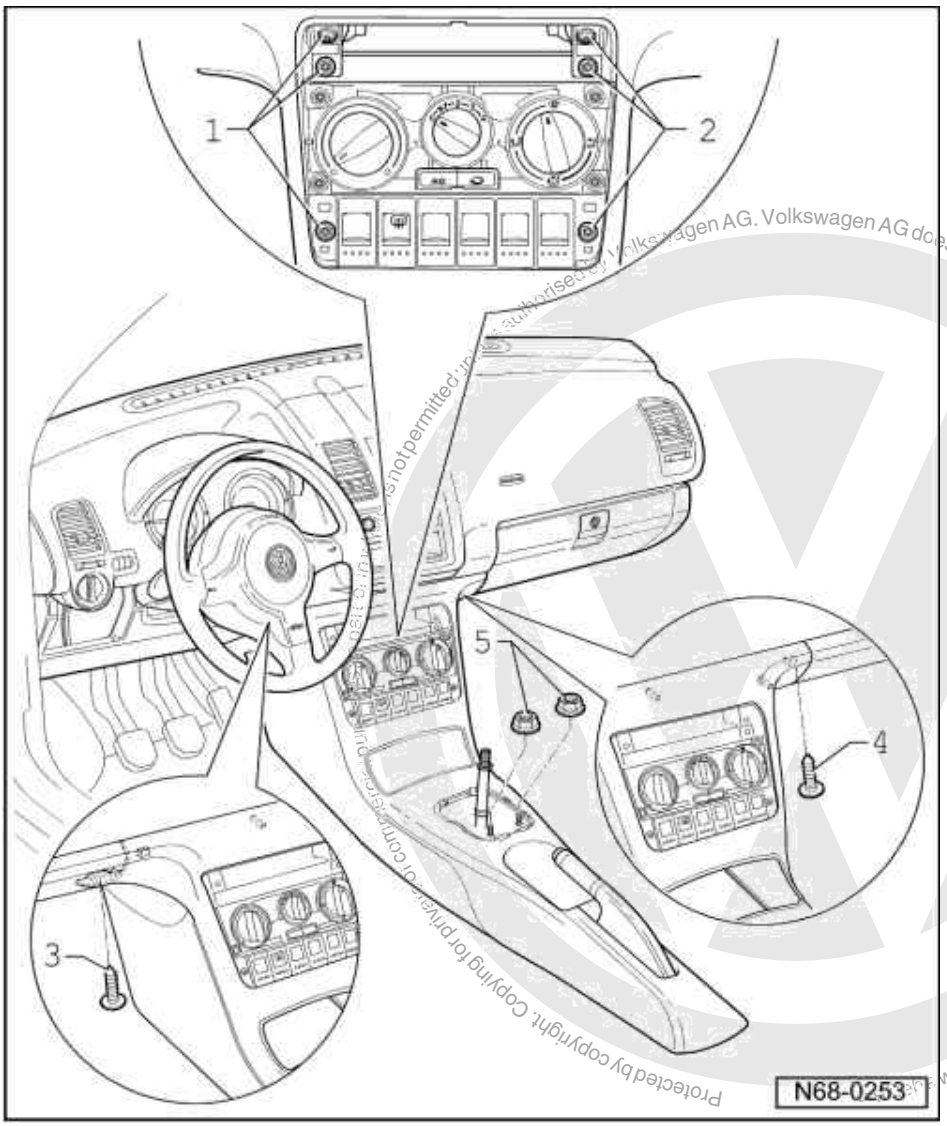
- It is not necessary to remove the gear stick knob and boot to remove the centre console. For a better representation they are not shown in the illustration.

satelettronica



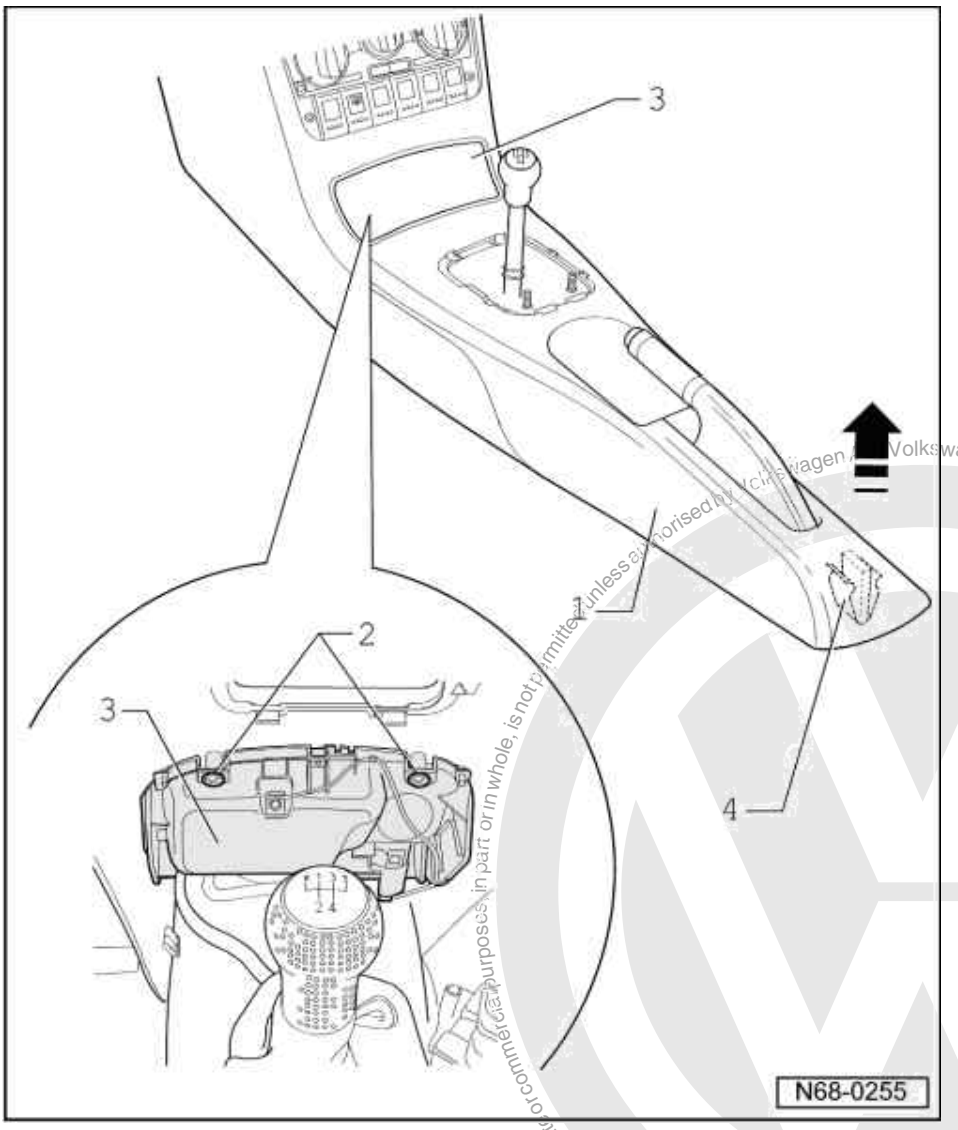
- Remove two screws -1-.
- Open glove box and remove screw -2-.
- Remove trim panel -3-.

satelettronica



- Remove self-tapping screws -1- and -2- (Qty. 3 each).
- Remove screw -3-.
- Remove screw -4-.
- Remove hexagon nuts -3-.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



Note:

- The centre console -1- is secured with a clip -4- at the rear on the tunnel.

- Unclip centre console -1- at rear and swing up in direction of arrow.
- Remove screws -2- and remove ashtray -3- from the centre console.
- Take out centre console.

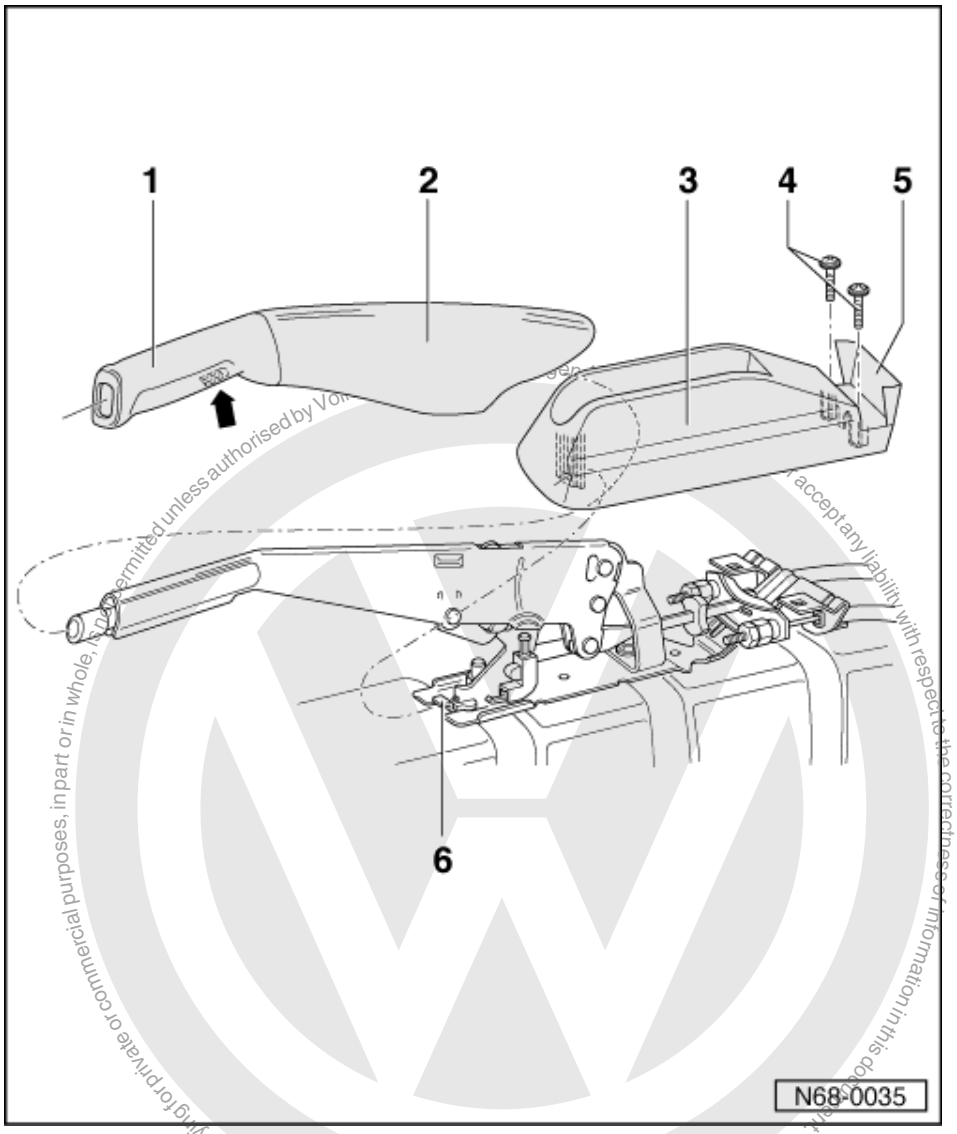
satelettronica

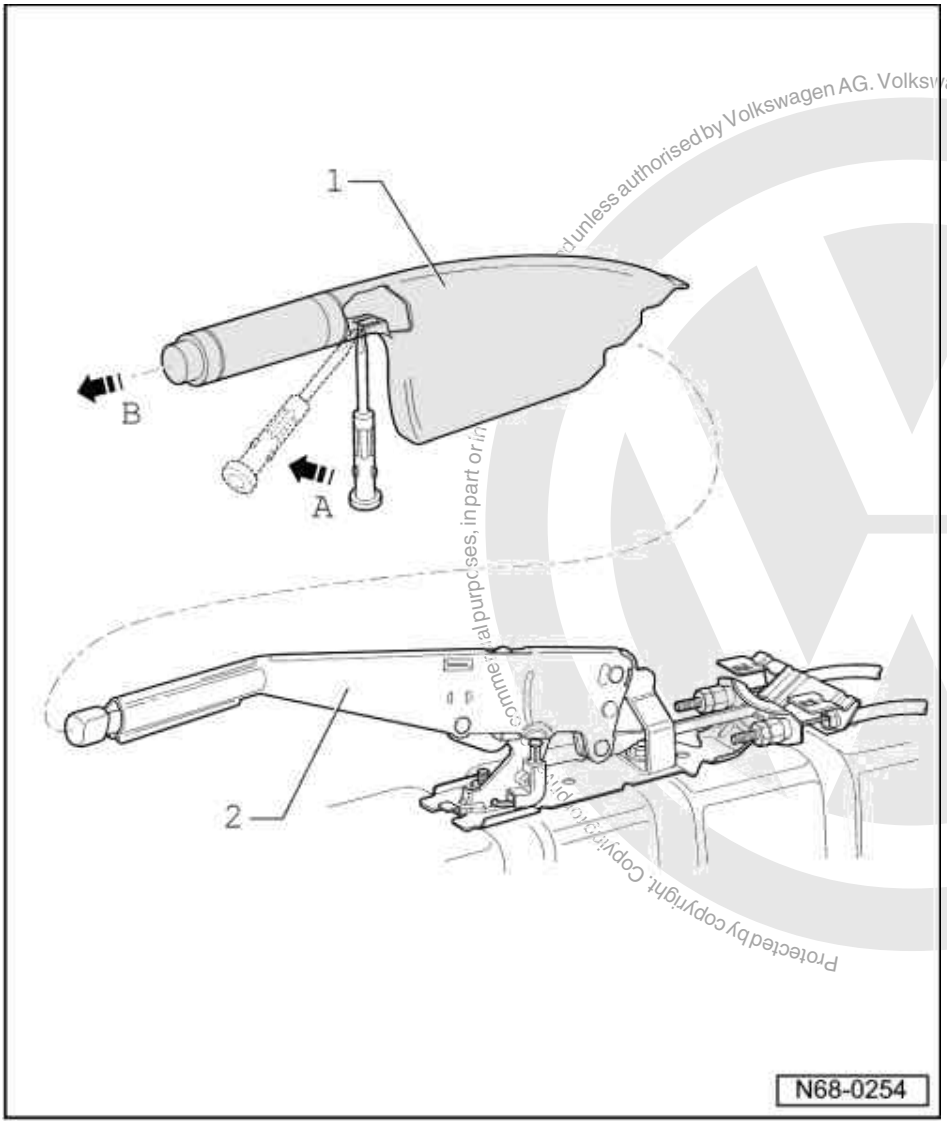
2.4 - Removing handbrake lever grip and trim (Caddy, Polo Classic > 09.99, Polo Estate > 09.99)



- Pull up handbrake lever.
- Lever locking lug -arrow- out with screwdriver.
- Pull trim -1- and -2- off handbrake lever.
- Lever up cover -5- on trim -3- and open out.
- Remove cross-head screws -4-.
- Unhook front of trim -3- from securing lug -6- and take upwards off handbrake lever.

satelettronica

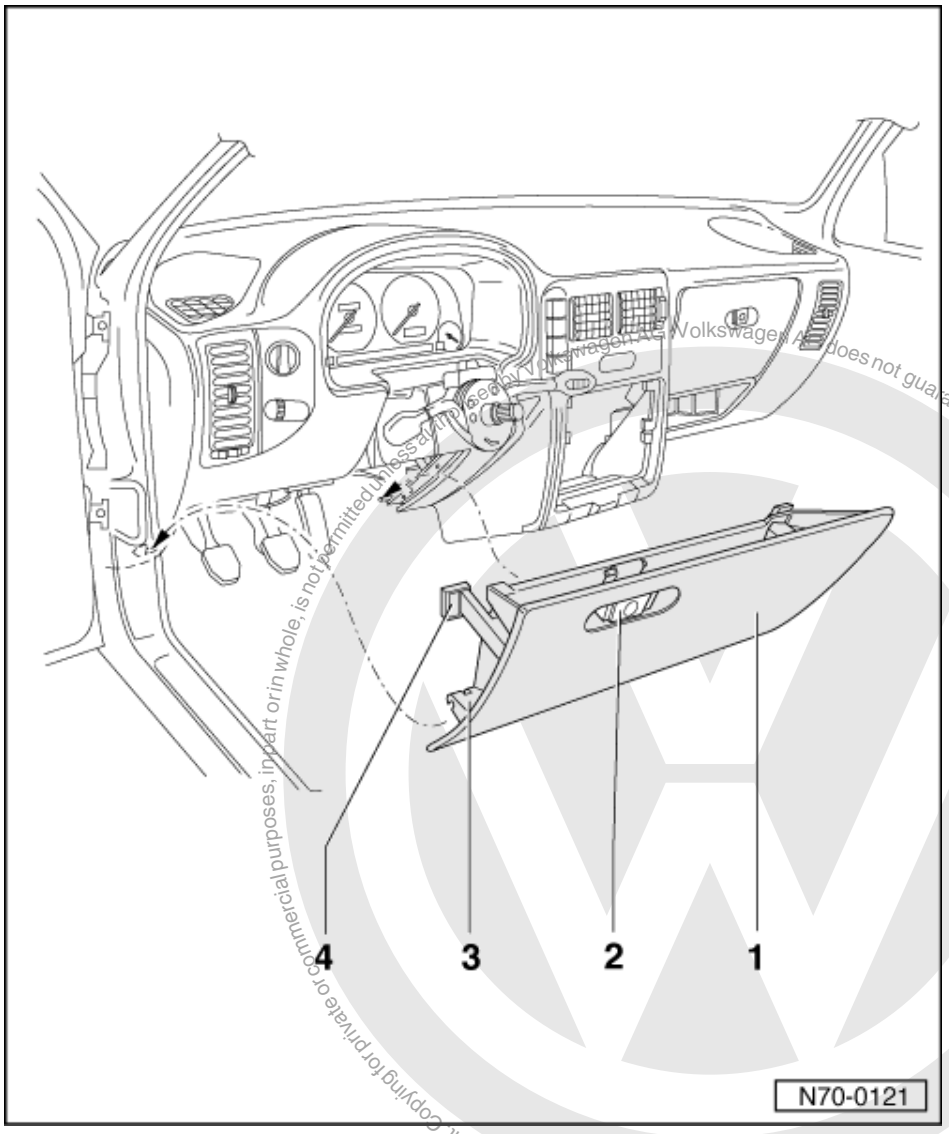
2.5 - Removing handbrake lever hand grip (Polo Classic 10.99 >, Polo Estate > 10.99)



- Pull up handbrake lever.
- Place a small screwdriver in the recess in the handbrake lever and push in direction of hand grip -arrow A-.
- Pull hand grip -1- off handbrake lever -2-, -arrow B-.

Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

2.6 - Removing and installing driver's side compartment (Caddy, Polo Classic > 09.99, Polo Estate > 09.99)



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

Older vehicles

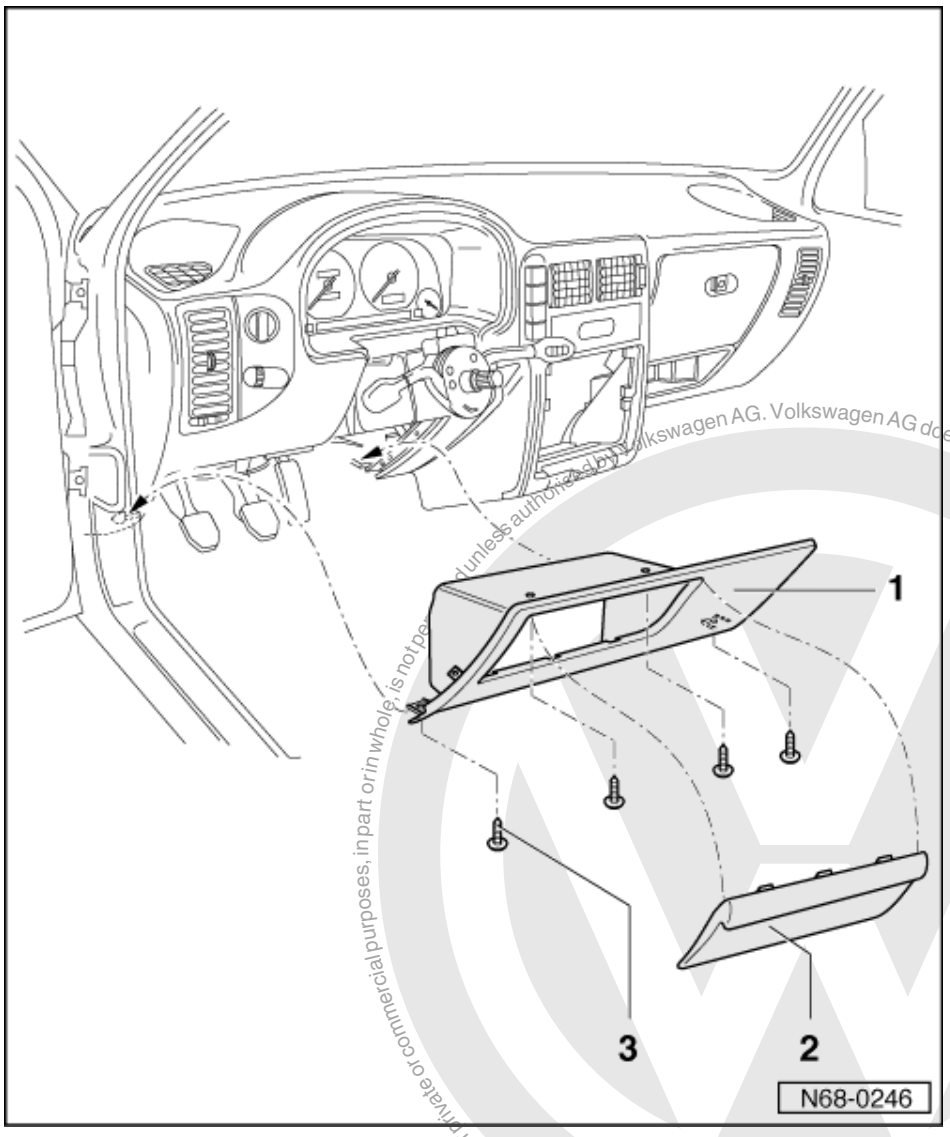
1 Stowage compartment

2 Latch

3 Hinge

4 Stop

- Removing:
- Open latch - 2 -.
- Push stowage compartment - 1 - upwards until the hinges - 3 - unhook.
- Pull compartment - 1 - off slightly in lower area and guide out of dash panel downwards together with stops - 4 -.



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

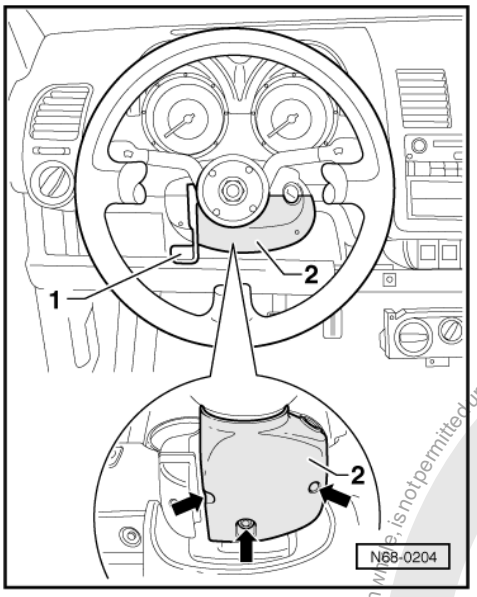
Newer vehicles

1 Stowage compartment
2 Cover
3 Screw
- Qty. 4

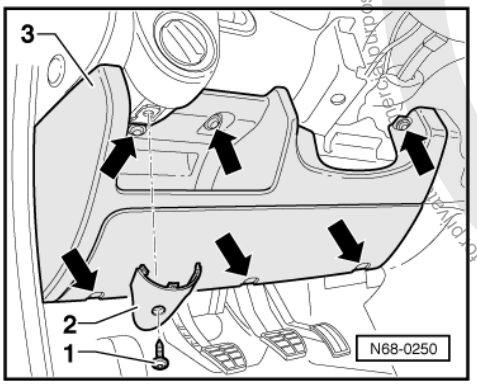
Removing

- Unscrew screws - 3 - (Qty. 4) and remove stowage compartment.

2.7 - Removing driver's side compartment (Polo Classic 10.99 >, Polo Estate 10.99 >)



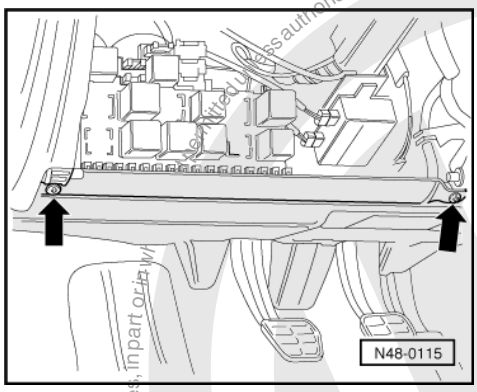
- -> Release height adjustment -1- for steering wheel.
- Move steering wheel to uppermost position.
- Remove screws -arrows-.
- Take off lower steering column switch trim -2-.



- -> Remove screw -1-.
- Take off cover -2-.
- Remove screws (Qty. 6) -arrows-.
- Remove driver's side stowage compartment -3-.

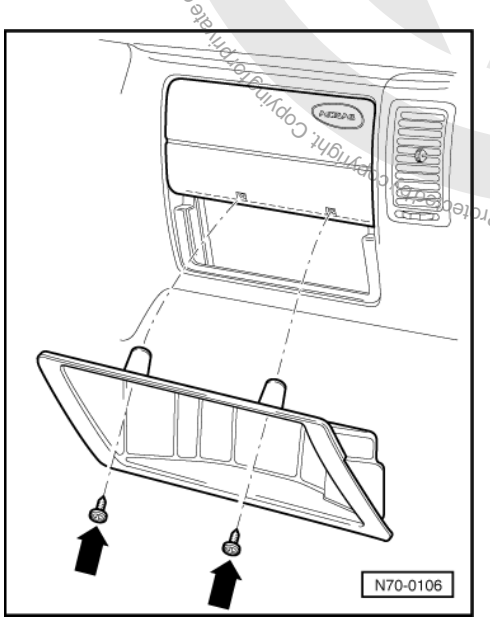
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

2.8 - Removing driver's side footwell cover



- -> Remove cross-head screws -arrows-.
- Take out driver's side footwell cover.

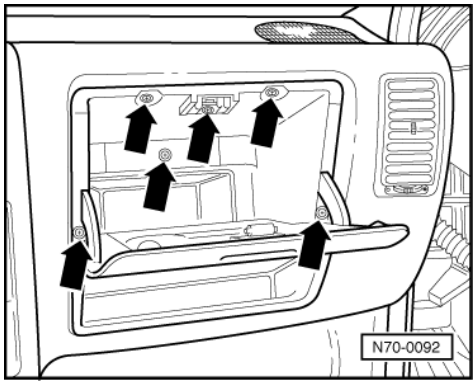
2.9 - Removing front passenger's compartment (Caddy, Polo Classic > 09.99, Polo Estate > 09.99)



- -> Remove cross-head screws -arrows-.
- Pull passenger side shelf out of dash panel.

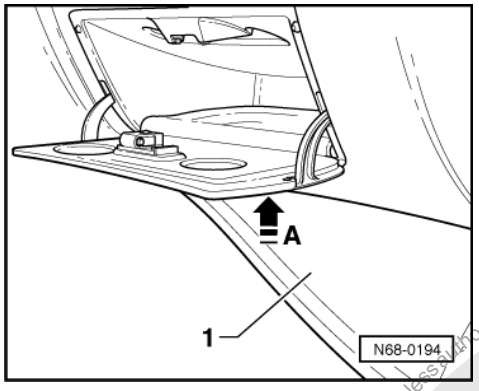
satelettronica

2.10 - Removing glove box (Caddy, Polo Classic > 09.99, Polo Estate > 09.99)

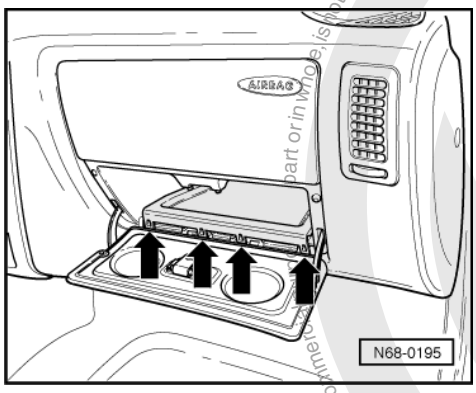


- Open glove box.
- -> Remove cross-head screws -arrows-.
- Pull glove box with shelf out of dash panel.

Removing glove box on vehicles with front passenger airbag



- Open glove box.
- -> Pull down trim under the dash panel -1-.
- Grasp behind dash panel -arrow A-.



- -> Release tongues on the felt insert and release from the retainer -arrows-.
- Push the felt insert upwards and then pull out forwards.

1 - Seat belts

1.1 - Seat belts

1.2 - Safety regulations for belt tensioners

- Testing, removing, installing and repair work may only be performed by qualified personnel.
- Belt tensioner components may be neither opened nor repaired; always use new parts (danger of accident).
- Belt tensioner units which have received hard knocks or been dropped on the floor, must not be fitted into a vehicle.
- Belt tensioner units which are mechanically damaged (dents, fractures) must be renewed.
- The storage and transportation complies with the legislation for explosive substances.
- The disposal of old components that have not been ignited (triggered) is carried out by the distribution centre or the importer.
- Belt tensioners that have ignited can be disposed of as normal scrap.
- The belt tensioner unit should be installed immediately after removing them from their packaging.
- No tools with hammer type action may be used to dismantle the belt tensioner.
- If the work is interrupted, the belt tensioner unit should again be placed in its packaging.
- It is not permitted to leave the belt tensioner unit unattended.
- The belt tensioner unit must not be treated with grease, cleaning or similar substances, nor may it be exposed to temperatures above 100° C, even for short periods.
- The pyrotechnic propellant has no expiry date, i.e. it has unlimited, maintenance-free life.

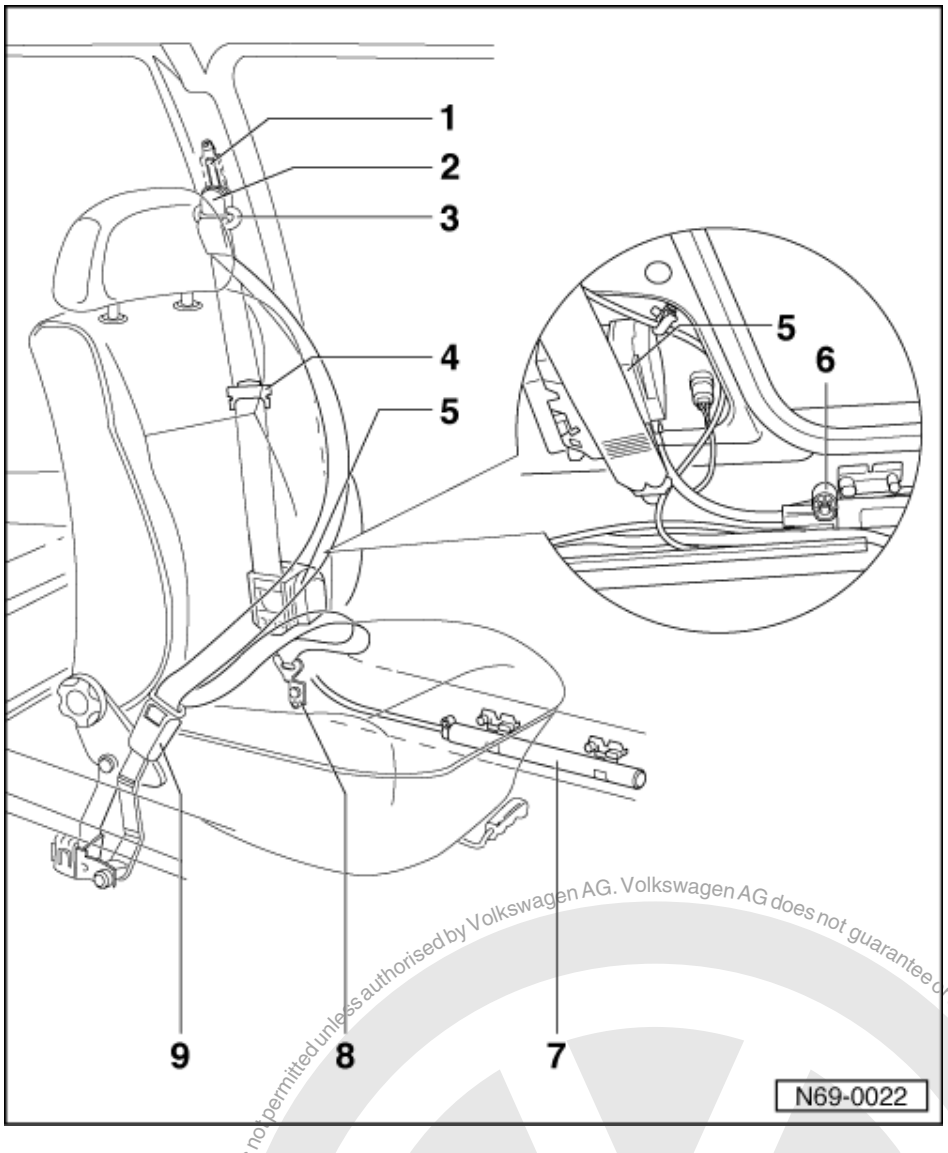
1.3 - Checking belt tensioner

- Pulling belt tensioner.

When the pre-tensioner has been triggered, the belt cannot be pulled out or roll back. The complete seat belt must be renewed.

satelettronica

1.4 - Removing and installing front seat belts with belt tensioning system (Caddy, Polo Classic > 09.99, Polo Estate > 09.99)



Warning!
Before commencing separating, straightening and panel beating work the belt tensioning units must be removed.

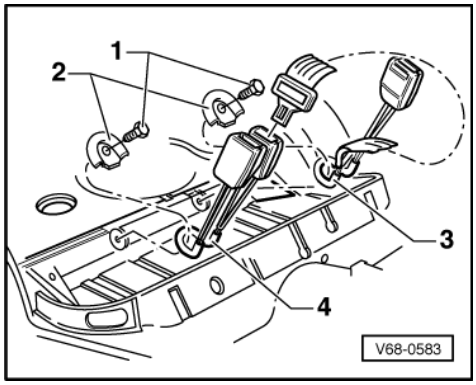
1.14 - Removing and installing lap belt and double latch



1 - -> Hexagon head bolt 40 Nm
2 - Cover cap
3 - Lap belt
4 - Double latch

2 - Inspecting seat belts

2.1 - Inspecting seat belts

Warning!
After every accident the seat belt system must be inspected systematically! If damage is determined when inspecting the check points, customer must be informed regarding necessity of changing belts.

Check points:

- Check webbing strap.
- Check inertia reel (locking effect).
- Visually check belt lock.
- Check belt lock function.
- Check belt guides and lock tongue.
- Check securing parts and anchorage points.
- Checking lap belt automatic retractor.

Note:

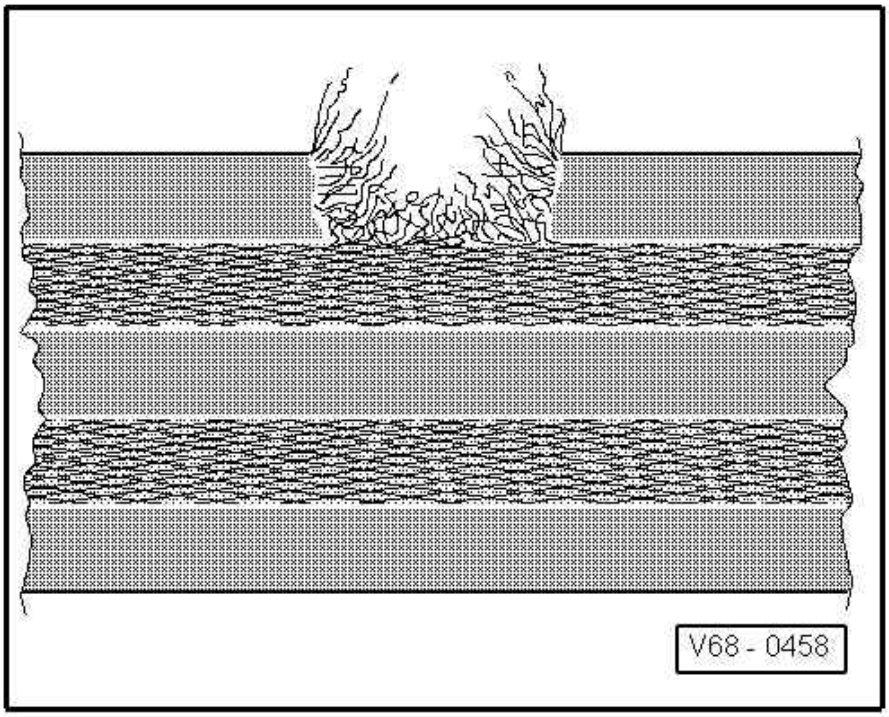
If customer refuses to have a damaged seat belt renewed, appropriate note should be made.

Checking webbing strap

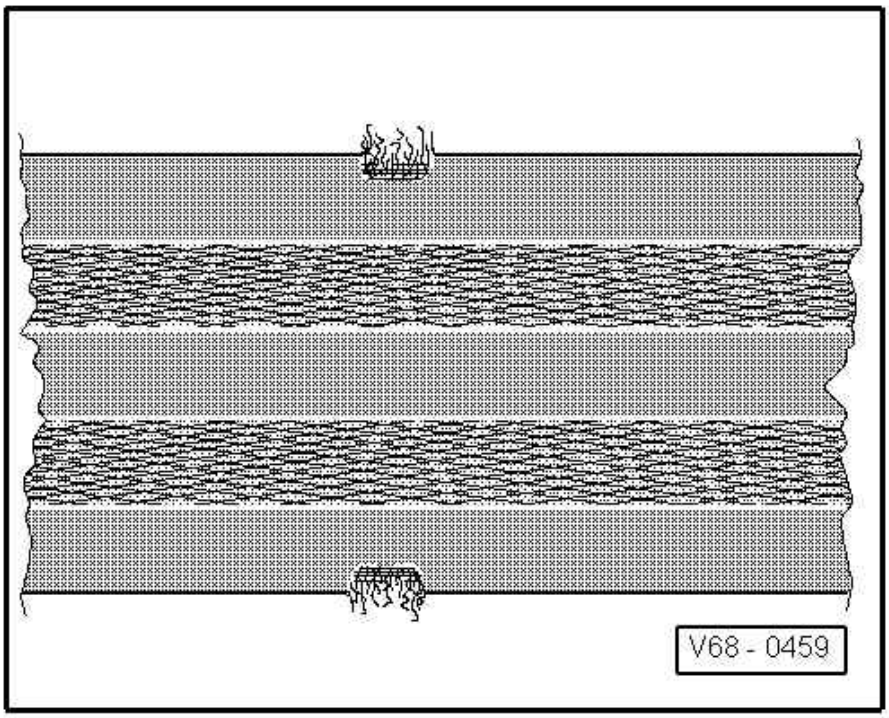
- Pull belt completely out of inertia reel or lap belt adjustment tongue.
- Inspect belt straps for dirt and, if necessary, wash with mild soap solution=> also refer to Instruction Manual.

- If either of the following illustrated damage examples (1 and 2) are determined on accident vehicle - renew seat belt complete with belt lock.
- If damage as illustrated under points 1, 2 or 3 is determined on vehicle which has not been involved in an accident, it is sufficient to renew damaged belt only.

Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelitronica



1 - -> Belt webbing cut, torn or chafed.



2 - -> Webbing loops on belt edge torn.

satelettronica

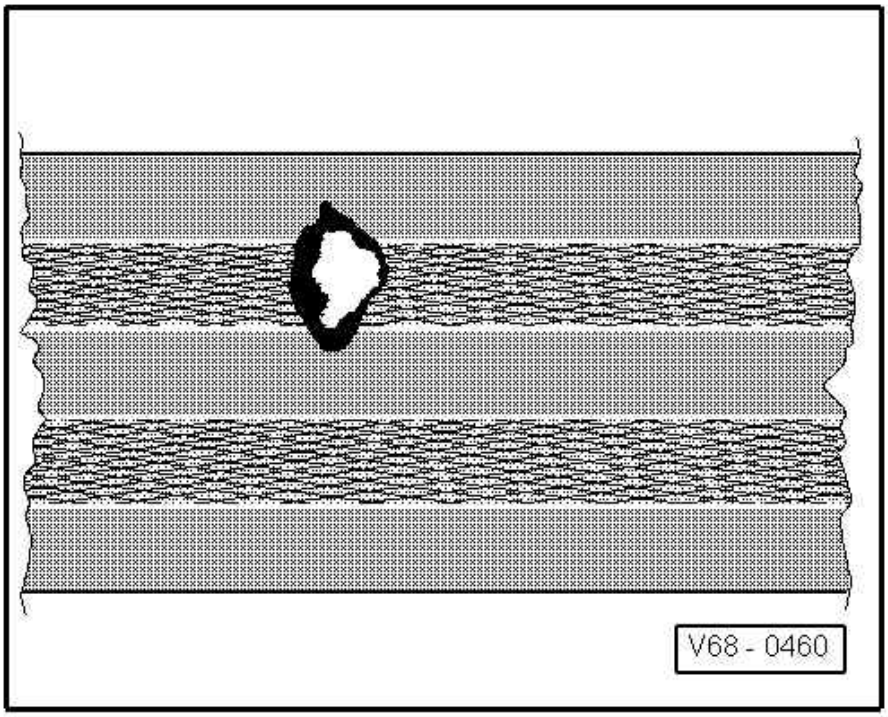
Protected by copyright. Copyright



3 - -> Burn marks from cigarettes or similar.

Checking inertia reel (locking effect)

Inertia reel has two locking functions.

- First locking function is initiated by belt being jerked out of reel (belt extraction acceleration).

Checking

- Pull belt out of inertia reel with firm jerk.

- No locking effect - renew seat belt complete with belt latch.
- If difficulties are experienced when pulling belt out or reeling belt in, first check whether position of inertia reel has been altered.

- Second locking function is initiated by change in vehicle movement sequence (vehicle-dependent locking function).

Checking

- Fasten seat belt.
- Accelerate vehicle to 20 km/h and then carry out emergency braking with foot brake.

- If seat belt is not locked by locking mechanism during braking procedure, seat belt complete with belt latch must be renewed.

Warning!
For safety reasons, road test should be carried out on traffic-free stretch to ensure that other motorists/pedestrians etc. are not endangered.

Visually checking belt latch

- Inspect belt latch for cracks and fracturing.

satelettronica

- If damage is determined, renew seat belt complete with belt latch.

Belt latch - Functional check

Checking latch mechanism:

- Push locking tongue into belt latch until it engages audibly. Check whether locking mechanism is properly engaged by giving belt firm pull.

- If belt tongue fails even only once to engage properly in belt latch during at least 5 tests, seat belt complete with belt latch must be renewed.

Checking release mechanism:

- Release seat belt by pressing button on belt latch with finger pressure.

  When belt is slack, locking tongue must spring out of belt latch on its own.

- Carry out test at least 5 times. If belt tongue fails even only once to spring out of latch, seat belt complete with belt latch must be renewed.

Warning! Under no circumstances whatsoever may lubricant be used to eliminate noise or stiffness at belt latch buttons.

Checking belt guides and locking tongues

Plastic-covered guides show fine parallel scoring after strain on belt system (when belt was fastened during accident). (Wear which has been brought about by frequent belt use can be recognized by smooth signs of wear which are free of scoring).

- Inspect or deformation, fracturing and cracks in plastic.

- If scoring and/or damage is determined, renew seat belt complete with belt latch.

Checking securing parts and anchorage points

- Latch bracket deformed (stretched)
- Height adjustment fitting not working
- Anchorage point (seat, pillar, vehicle floor) distorted or thread damaged

- If damage is determined on these parts, renew seat belt complete with belt latch.
- Renew anchorage points.

Note:

In case of damage which is not result of an accident, but instead wear by way of example, only the part which is actually damaged need be renewed.

3.5 - Safety precautions when working on the airbag

- Testing, removing, installing and repair work may only be performed by qualified personnel.
- When working on the airbag system, the battery earth strap must be disconnected.
  No waiting time is necessary after disconnecting the battery.
  When connecting the airbag system to a voltage source, no person must be present inside the vehicle.
- Before picking up (touching) the airbag unit the mechanic must electrostatically discharge him/herself. This is achieved by touching a suitable metal part, for example, a water pipe, heater pipe or metal frame.
- The airbag units should be installed immediately after removing them from their packaging.
- If the work is interrupted, the airbag unit should again be placed in its packaging.

Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

- It is not permitted to leave the airbag unit unattended.

- Airbag units which have been removed should be stored so that the padded side is facing up.
- Airbag units which have dropped onto a hard surface or show signs of damage must not be installed in the vehicle.
- Airbag units which have not been activated should be marked and returned to the manufacturer for disposal (use airbag unit transport container).
- The storage and transportation complies with the legislation for explosive substances.
- Only install original seat covers that have been authorized for use with side airbags (recognisable by airbag label).
- The use of commercially available loose fitting covers is not permissible (loose fitting airbag suitable covers are in preparation).
- When installing the backrest cover ensure that the cover seam is straight in the area of the side airbag.

- Renew all cover clips.
- Only use original clips.
- For safety reasons always renew cover if damaged in area of side airbag - torn, burn holes etc. -.

3.6 - Replacing airbag units following an accident

Accident involving activation of airbag

Always exchange the following:

- All triggered airbag units with control units and sensors
- Support for front passenger module
- Coil connector with slip ring
- All seat belts with triggered belt tensioners
- In addition, the following must also be replaced if necessary (visual check):
  All damaged components

Accident not involving activation of airbag

- If the airbag warning lamp (K 75) does not indicate a fault, it is also not necessary to replace the airbag components. The seat belts should be checked separately.

After replacing the airbag units or the control unit, affix stickers (only tear-off strips) to the registration card and return the registration card to the relevant Sales Centre or to the Importer for registration.

The registration card 000 010 227 C must be ordered separately.

satelettronica

Removing

Warning!
Disconnect battery earth strap before working on electrical system.

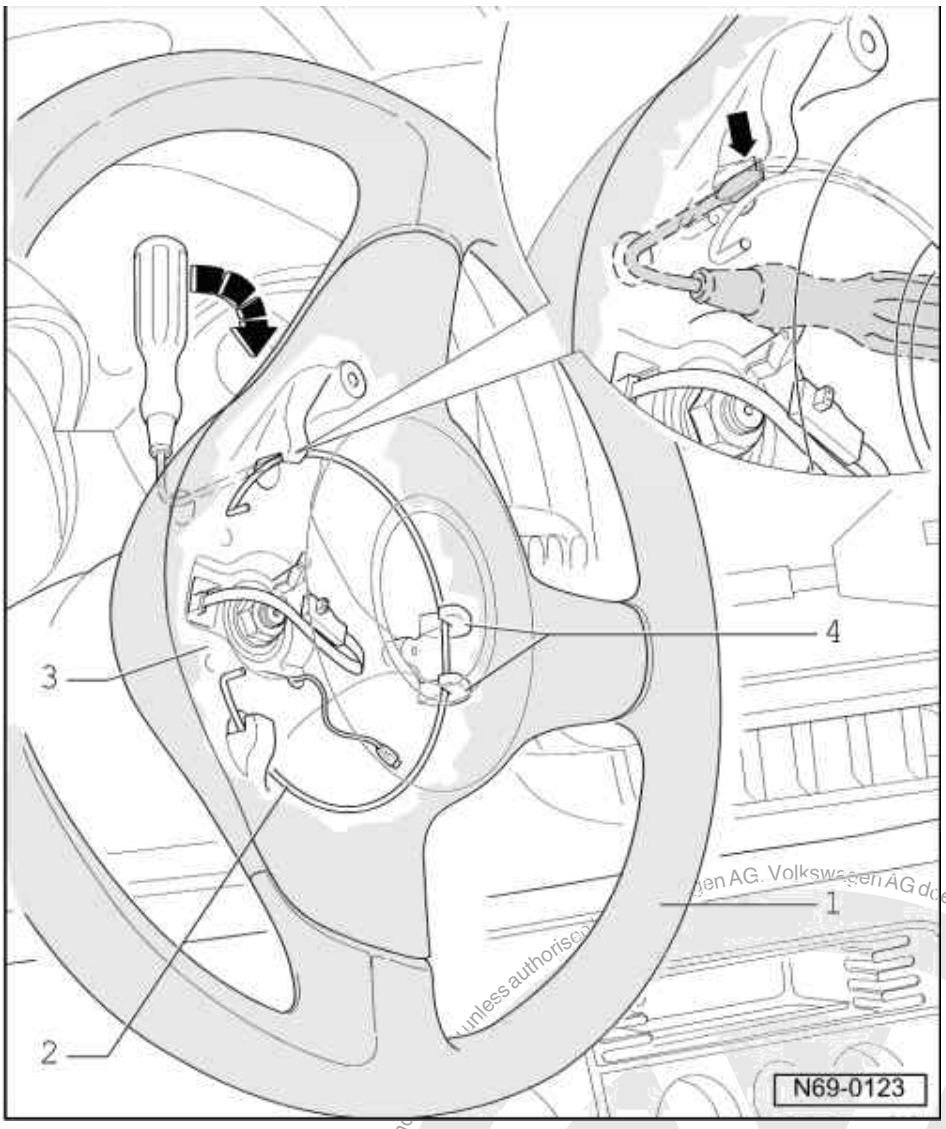
Warning!
Technicians must electrostatically discharge themselves by touching an earthed metal part, like e.g. water pipes, heating pipes or a metal frame.

Notes:

- Before disconnecting the battery see the note concerning the coding in the instruction manual for the radio.
- After reconnecting the battery, ensure vehicle equipment (radio, clock, electric windows) are checked as per Workshop manual/Owner's manual.

- Turn steering wheel - 1 - until horizontal steering wheel spokes are vertical. Pull out steering column completely and press down to lowest position.
- Insert a screwdriver, with approx. 5 mm wide blade and angled to give a length of 55 mm, from the reverse side into hole in steering wheel hub.
- Turn screwdriver through 90°, thereby pushing securing ring -2- off locking lugs in steering wheel hub and thereby releasing airbag unit on this side.
- Turn steering wheel back 180° and release second locking lug on opposite side.

satelettronica



- Grasp airbag unit on horizontal spokes and push out of vertical anchorage.
- Pull connector off airbag unit.

Installing

- Fit connector onto airbag unit.
- Position airbag in installation position. Lock airbag unit by pressing on horizontal spoke section first and then on vertical section.
- Switch on ignition.

Warning! When connecting the battery earth strap ensure no person is in the vehicle.

- Connect battery earth strap.

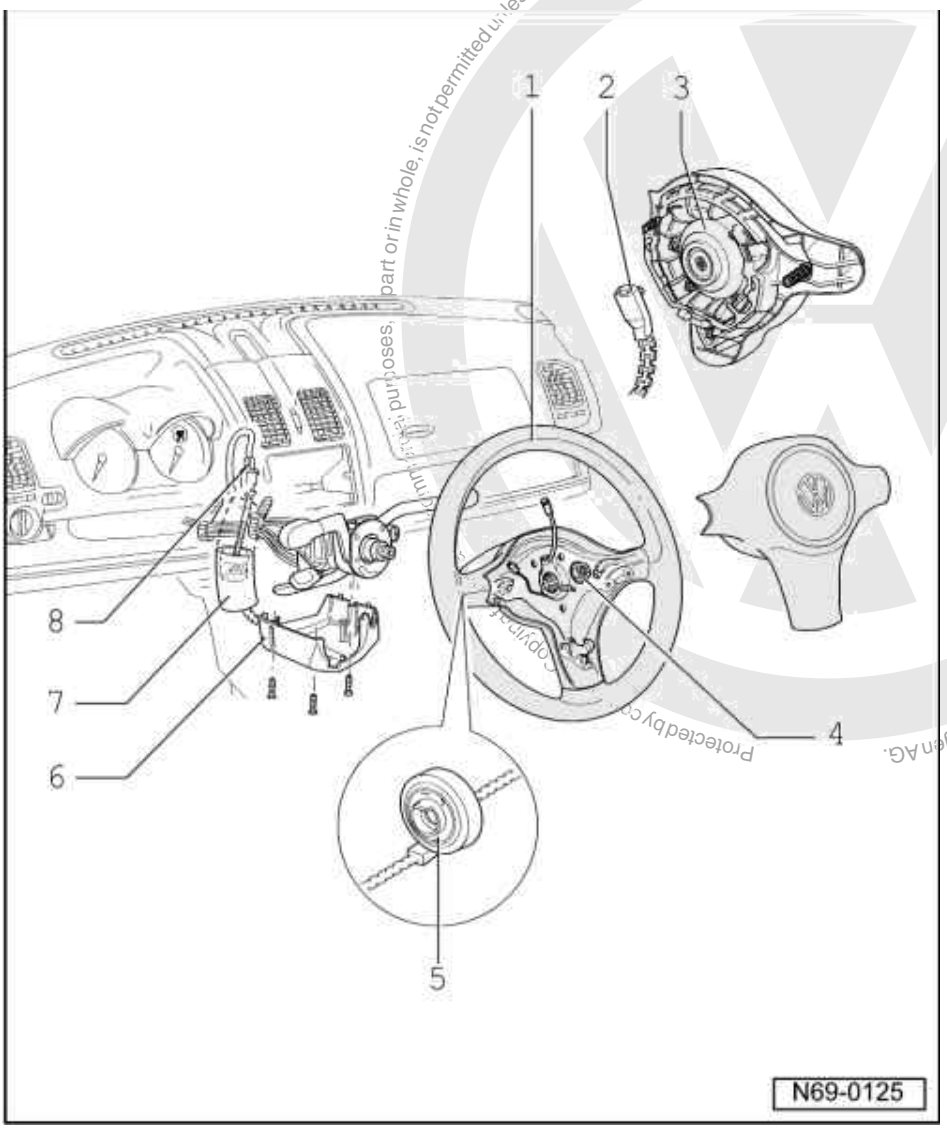
8 Connector

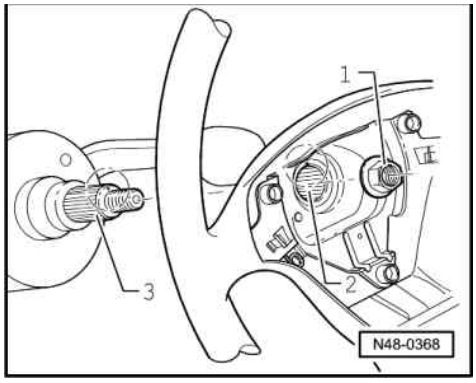
satelettronica



Removing

- Removing driver's airbag unit => Page 60 .
- Remove steering column switch lower trim section - 6 -.
- Pull foam tube - 7 - off the connector - 8 - and separate connector.
- Turn wheels to straight-ahead position.
- Remove hexagon nut - 4 - and pull steering wheel off steering column (hexagon nut 50 Nm).

Coil connector with slip ring - 5 - remains on the steering wheel.



Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Reproduction, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

Installing

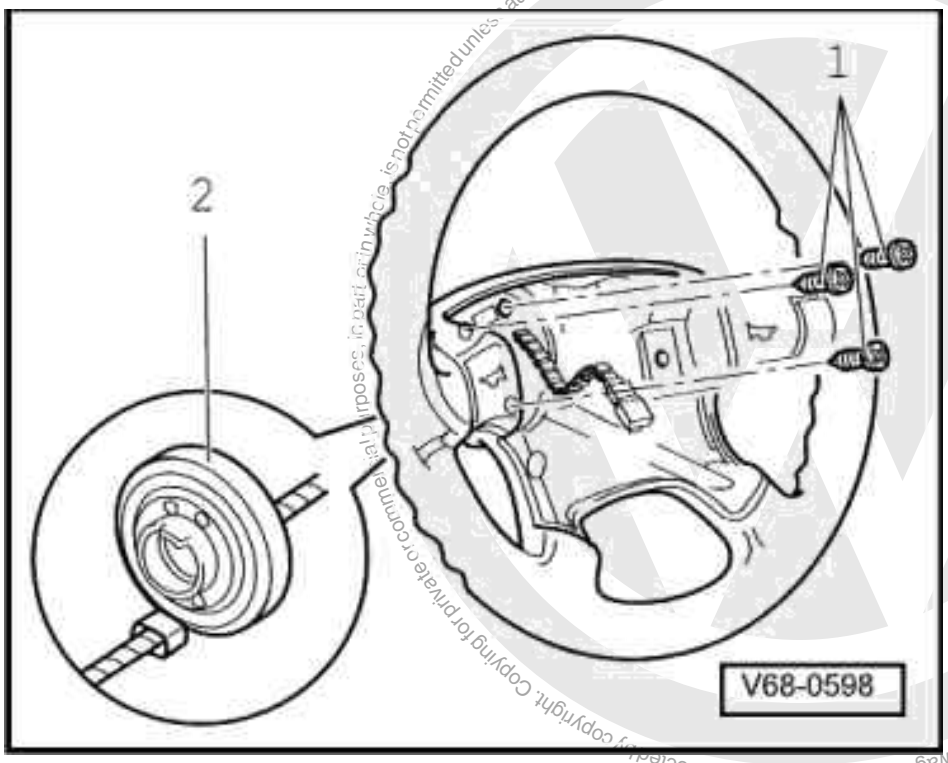
- -> Fit steering wheel so that the line marked on the steering wheel hub -2- and the centre punch mark on the steering column align -3-.

Steering columns supplied as a spare part do not have a centre punch mark.

They must be marked after performing alignment tests or a test drive.

Tightening torques:	
Hexagon collared nut -1- to steering column	50 Nm

3.11 - Removing and installing coil connector with slip ring (Caddy, Polo Classic > 09.99, Polo Estate > 09.99)



Driver airbag unit and steering wheel removed.

- Separate single connector for horn.
- -> Unscrew Phillips screws -1- and pull coil connector with slip ring -2- off the steering wheel.

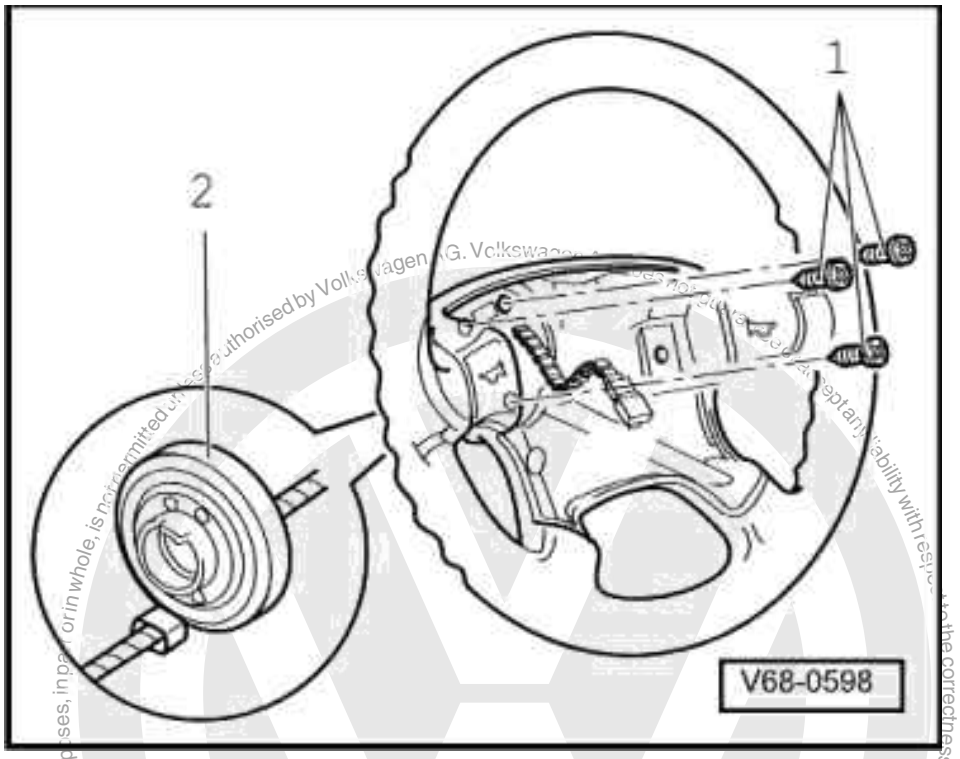
Note:

The steering must be in the centre position (wheels in straight-ahead position) when the coil connector and slip ring are removed and installed.

Coil connector with slip ring is secured as a new part in the centre position with a cable tie.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

3.12 - Removing and installing coil connector with slip ring (Polo Classic 10.99>, Polo Estate 10.99>)



- Driver's airbag, steering wheel and lower steering column switch trim removed.

- Separate single connector for horn and connector from coil connector with slip ring.
- -> Unscrew Phillips screws -1- and pull coil connector with slip ring -2- off the steering wheel.

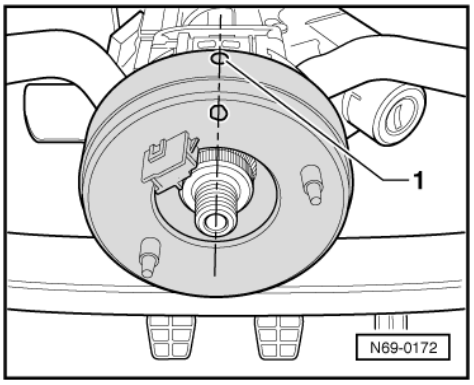
Notes:

- When removing and installing the coil connector with slip ring, ensure that the coil connector is in the centre position.
- As a new part the coil connector with slip ring is secured in the centre position by a cable tie.

The following work sequence is valid only for vehicles with Electronic stability programme -ESP-

Vehicles with ESP are additionally equipped with a steering angle sensor -G85. The sensor is installed together with the coil connector and slip ring in a housing.

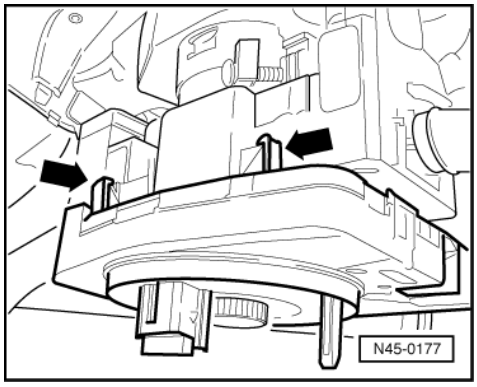
- Front wheel and steering wheel must be in straight-ahead position.



- If necessary position front wheels in straight-ahead position and remove steering wheel.
- -> Position steering wheels in central position;
  A yellow spot must be visible in hole -1-.

satelettronica

The markings must align.



- Separate steering angle sensor connection.
- -> Lift hooks -arrows- carefully and pull off steering angle sensor.

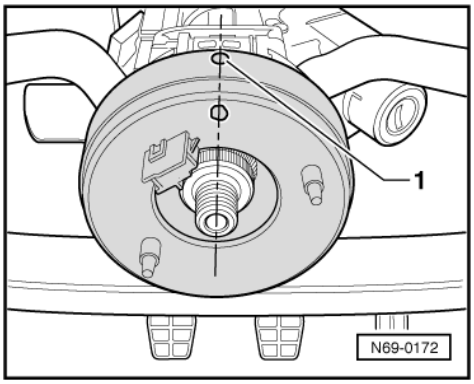
Installing:

- Installation is carried out in the reverse sequence

For vehicles with -ESP- observe the following

When installing ensure steering angle sensor is correctly seated and is free of stress.

- Front wheel and steering wheel must be in straight-ahead position.
- Remove transportation protection on markings before installing a new steering angle sender.



- Fit steering angle sensor, until lugs engage.
- -> Position steering angle sensor in central position;
  Yellow spot must be visible in hole -1-.
  The markings must align.
- Then a zero comparison must be performed.

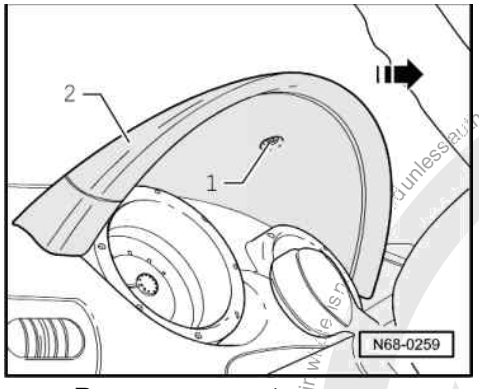
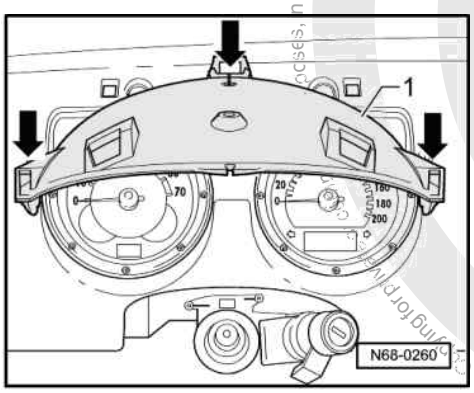
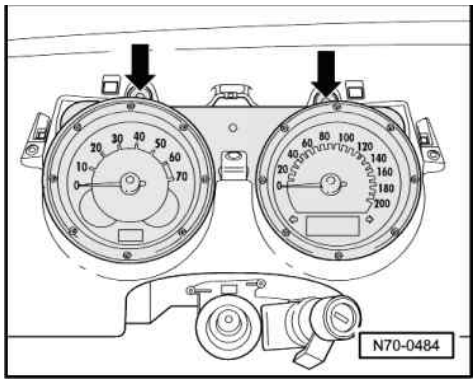
- Remove driver's stowage compartment =>Page 17 .
- Remove centre console =>Page 9 .
- Remove glove compartment =>Page 20 .



- -> Remove screw -1-.
- Unclip upper part of instrument hood -2- in direction of arrow.

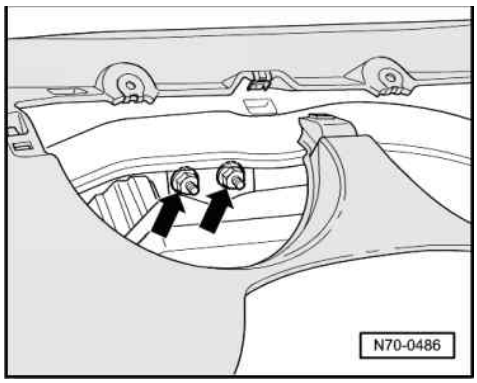


- -> Remove three screws -arrows-.
- Remove lower part of instrument hood -1-.



- -> Remove Qty. 2 screws -arrows-.
- Take out combi instrument.
- Pull connector off.

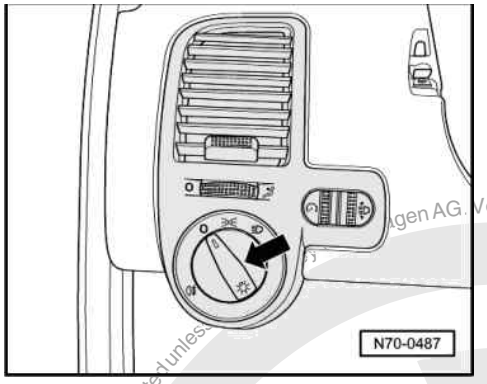
Protected by copyright. Copying for private or commercial purposes, in part or in whole is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



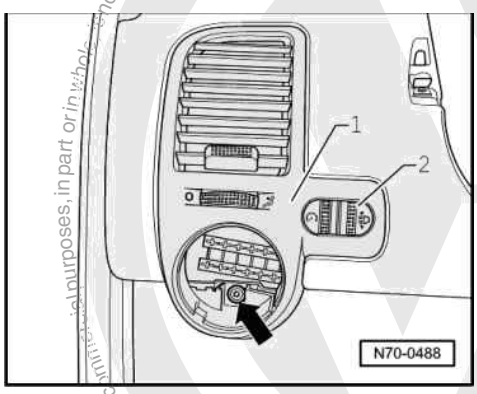
- -> Remove hexagon nuts -arrows-.

Note:

- The two hexagon nuts are visible first after removing the combi instrument.

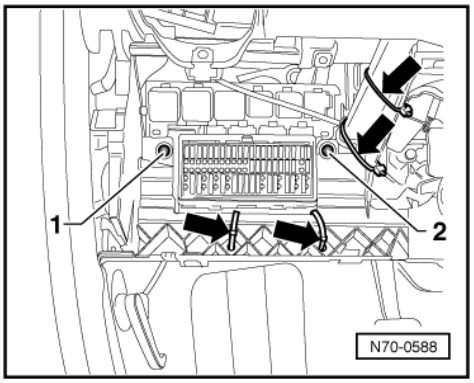


- -> Press in lighting switch -arrow-, turn clockwise and pull out.
- Pull connector off.

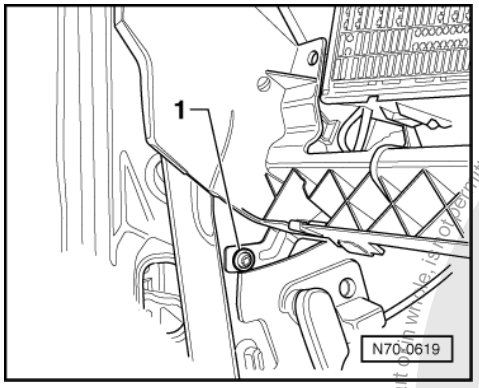


- -> Remove bolt -arrow-.
- Pull out vent on driver's side -1-.
- Pull off connector on headlight range control -2-.

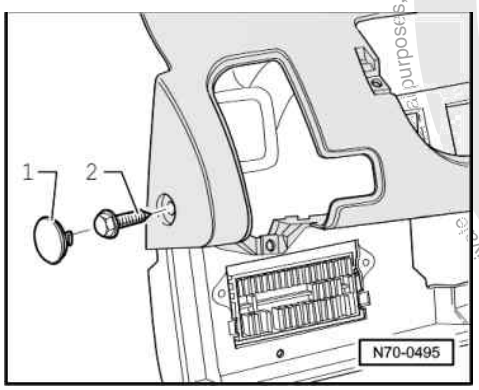
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



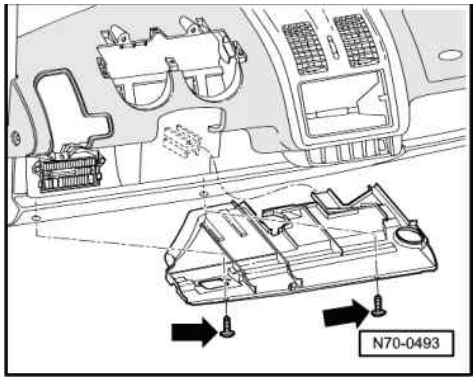
- -> Remove screws -1- and -2-.
- Cut through cable tie -arrows-.



- -> Remove bolt -1- on left and right-hand sides.



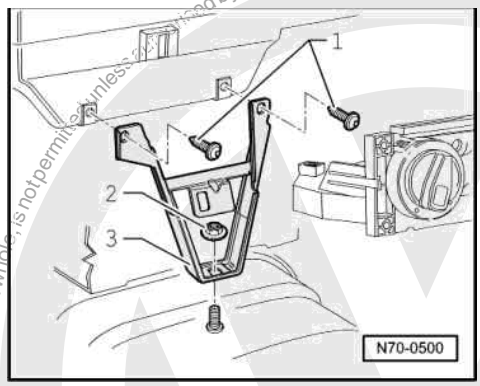
- -> Unclip cover cap -1- on left and right.
- Remove bolt -2- on left and right-hand sides.



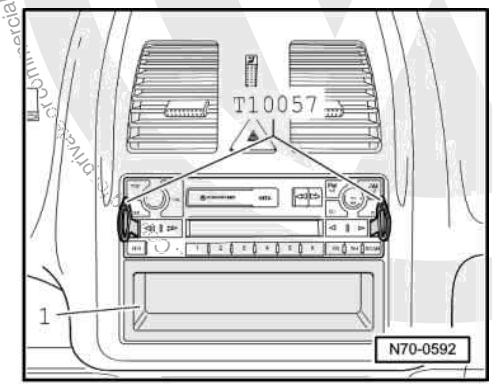
- -> Remove Qty. 2 screws -arrows-.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Take out driver's side footwell cover.



- -> Remove Qty. 2 screws -1-.
- Remove hexagon nut -2-.
- Take out support -3-.

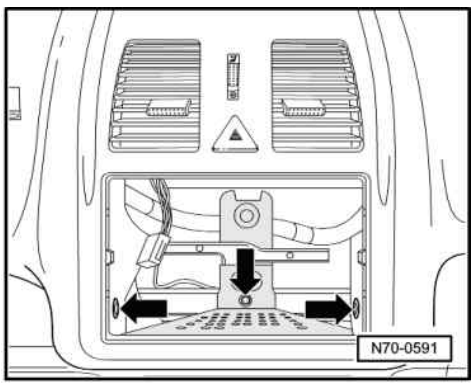


- -> Slide radio release tool T10057 into the release slots until they engage.
- Pull radio out of the dash panel using the grip rings of the release tools and disconnect connectors.

Notes:

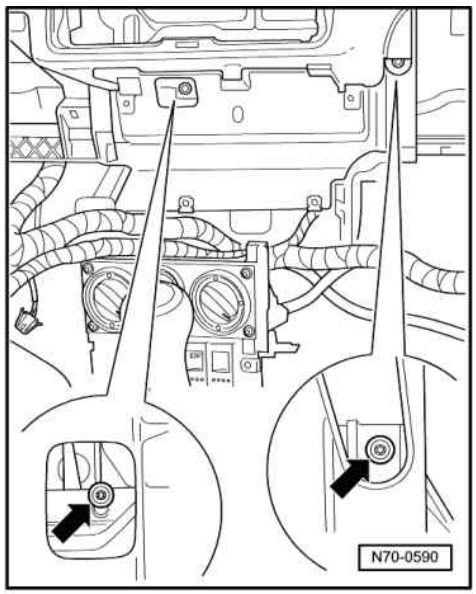
- When doing this the radio release tool T10057 must not be pushed to the side or tilted.
- To remove the release tools from the radio the locating lugs on the side of the radio must be pressed inwards.

- Pull out stowage compartment -1-.



- -> Remove Qty. 3 screws -arrows-.
- Take out centre vent.
- Pull connector off hazard warning light switch.

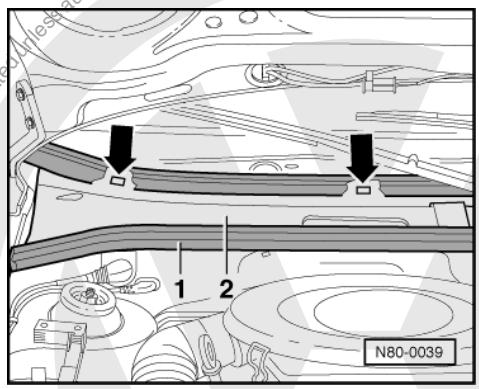
Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



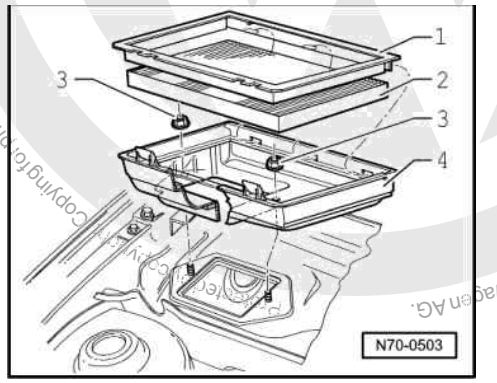
- -> Remove Qty. 2 screws -arrows-.

Note:

- The screws are visible through the openings, they are set back approx. 2 cm.

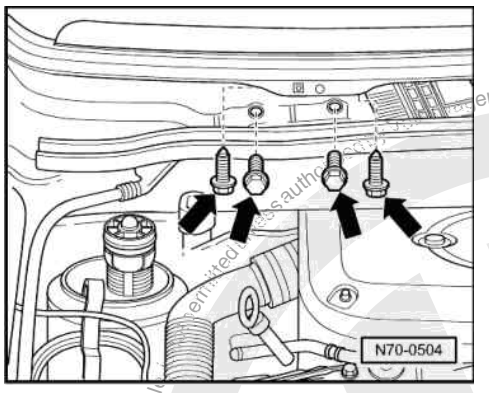


- -> Pull off rubber seal -1- upwards as far as centre of vehicle.
- Unclip plenum chamber cover -2- (arrows) and pull out.

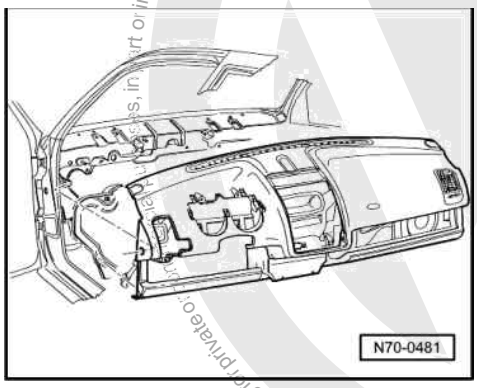


- -> Unclip pollen filter frame -1-.
- Take out pollen filter -2-.
- Remove hexagon nuts -3-.
- Take out pollen filter housing -4-.

Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica



- -> Remove Qty. 4 bolts -arrows-.



- -> Pull dash panel out slightly.

Note:

- The wiring harness is secured to the dash panel by clips and cable ties. The wiring harness remains in the vehicle when removing the dash panel.

- Release clips, cable ties and connectors depending upon the vehicle equipment level.
- Lift out dash panel.

Installing

Install in reverse order.

Note:

- If the airbag fault warning lamp (K 75) signals a fault after assembling then the fault memory must be erased and interrogated again with fault reader V.A.G 1551
